NEW marks cases added in the latest automation waves — including the **Bug-Regression suite** (`TC-REG-*`), 183 cases mined from the Jira bug backlog (positive / negative / edge / data-validation / regression) so previously-reported defects cannot silently return.  marks a case that guards a previously-registered Jira bug (all 183 `TC-REG-*` cases); the originating Jira keys are in each test's `// guards:` comment.
